

Secure policy, lexicon, and on-demand encryption that is transparent, automated and easy to use

ExchangeDefender Encryption allows businesses to securely send, deliver, and manage confidential email. Whether your compliance officer provides a lexicon of words to trigger encryption, or your IT administrator configures sender/recipient policies for automatic encryption, or if you simply decide while sending the message that you want it encrypted – our encryption product will deliver messages securely to your recipients.

The system is entirely transparent with no software to install or manage on either end. Most importantly for everyone involved – it's extremely user friendly.

Encryption Highlights

Pattern Matching

Pattern-based encryption that can detect credit card numbers, social security numbers, dates of birth etc.

Lexicon Keyword Matching

Lexicon dictionaries can contain words and word patterns that can trigger encryption mechanisms and protect from data leakage.

Corporate Encryption Mechanisms

Corporate encryption mechanisms can automatically encrypt messages or forward the contents to the administrator for the corporate review.

Comprehensive Reporting

Comprehensive reporting of all email activity as well as a Compliance Officer (CO) reporting with search capabilities provide proof of regulatory compliance and simplify reporting.

Regulatory Compliance Suite

Regulatory Compliance Suite consists of **Compliance Archiving**, **Corporate Encryption** and **Compliance Officer** functionality for security, protection, and rich reporting. Compliance Reporting enables Compliance Officers to have an overview of all activity across the entire organization to assure all policies are being implemented, controlled and reviewed.
